

# WORKFORCE ADMINISTRATION SOLUTION (DEV)

TEAM MEMBERS	NAAN MUDHALVAN ID
SANTHOSHKUMAR M	DA15AF36C13251186D94DA81912E97AC
RUTHRAVEL J	82CAB6EA65C7D05A4CD476562A18BEFC
SUNDARRAJ C	4E2E09CF59F0A118F564D20E4FDF4D04
SARAVANA PRAKASH S	671992A0E157F9BBD40407B0F32C447E

## 1. Project Overview

The Workforce Administration Solution (Dev) project is focused on developing a comprehensive Salesforce-based system to optimize employee and project management. Key activities include creating and customizing employee and project objects, adding fields (like Date of Birth, picklists, and formula fields), and establishing master-detail relationships for data integrity. The project also involves setting up custom tabs, Lightning components, and profiles to enhance user experience and security. Additionally, automation through Apex triggers, data import/export processes, and the creation of custom reports and dashboards will streamline workflows. The system will support role-based permissions, facilitate internal communication via Chatter, and ensure a seamless transition for users with tailored configurations for different employee types (e.g., On-Site, Remote). The goal is to provide a tailored, efficient solution for managing workforce data and project progress.

## 2. Objectives

The objective of the Workforce Administration Solution (Dev) project is to develop a Salesforce-based system that streamlines and automates workforce management processes.

### **Examples:**

#### **Business Goals:**

- The primary business goal of the Workforce Administration Solution (Dev) project is to optimize workforce management through a comprehensive Salesforce-based solution. This solution aims to improve operational efficiency, enhance data integrity, and provide actionable insights, ultimately supporting better decision-making and streamlined HR processes across the organization.

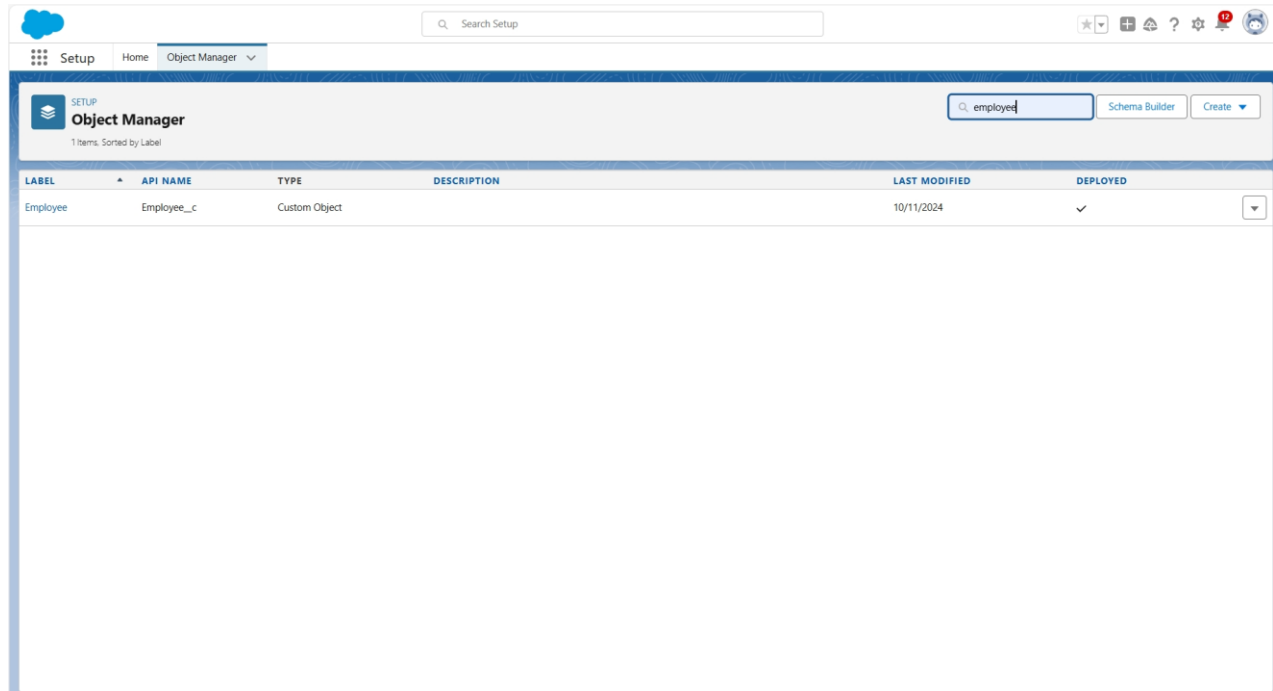

#### **Specific Outcomes:**

- ✓ **Improved decision-making:** Real-time dashboards and reports will give managers and executives immediate access to performance data, allowing them to make more informed decisions.
- ✓ **Higher employee satisfaction:** Simplified processes, faster access to information, and better communication tools will enhance the overall employee experience and support HR initiatives effectively.
- ✓ **Scalable solution:** The platform will be built with future growth in mind, allowing easy updates or additions as the organization evolves, ensuring long-term value and flexibility.

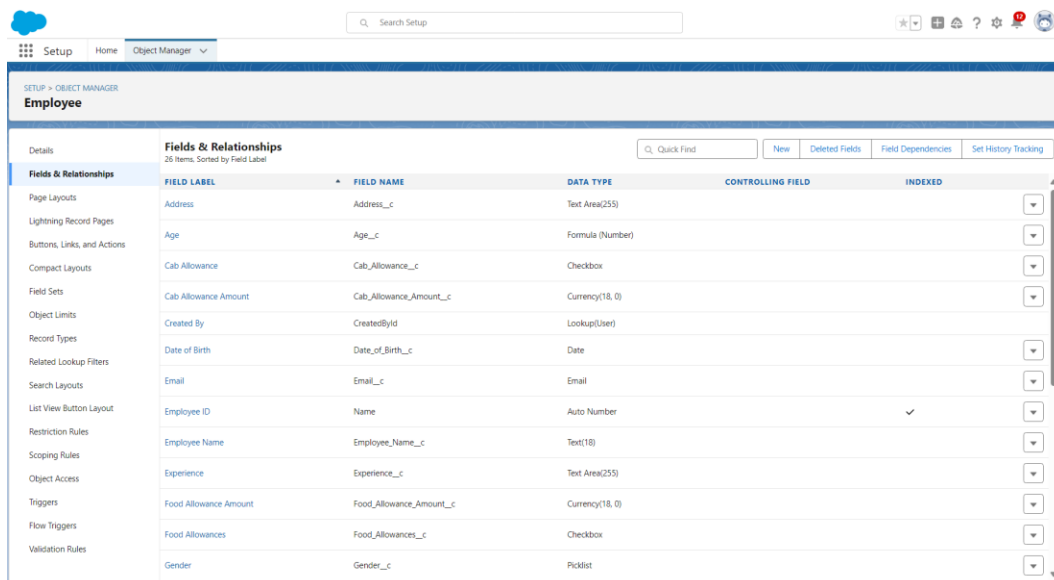

## 3.Salesforce Key Features and Concepts Utilized

### 1. Custom Objects and Fields:

**Custom Objects:** The project uses custom objects such as "Employee" and "Project" to store specialized data that is specific to workforce management. These objects are central to managing employee information and project details.

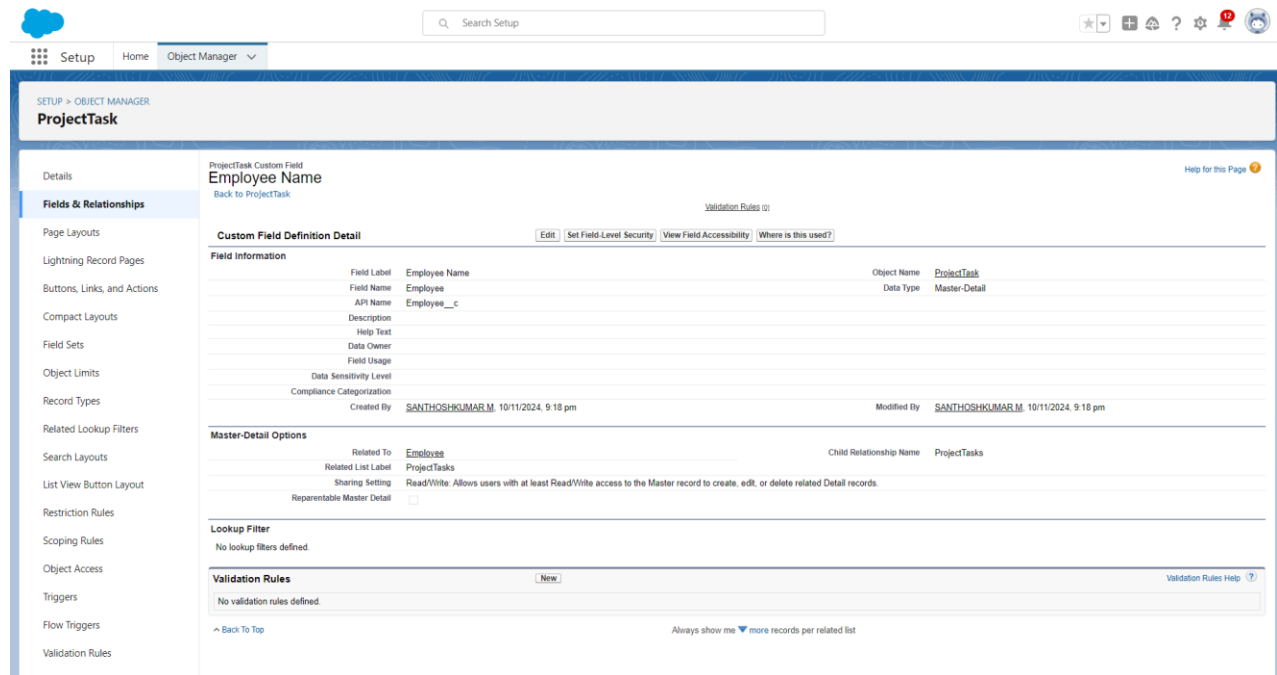

**Custom Fields:** To tailor the objects to business needs, custom fields like text fields, picklist fields (e.g., employee type, status), and formula fields (e.g., calculated metrics) are added to capture important data attributes.

## 2. Master-Detail and Lookup Relationships:

**Master-Detail Relationship:** A master-detail relationship between the Employee and Asset objects is used to maintain strong data integrity, where the child record (Asset) is dependent on the parent record (Employee) for its existence.

### 3. Profiles and Permission Sets:

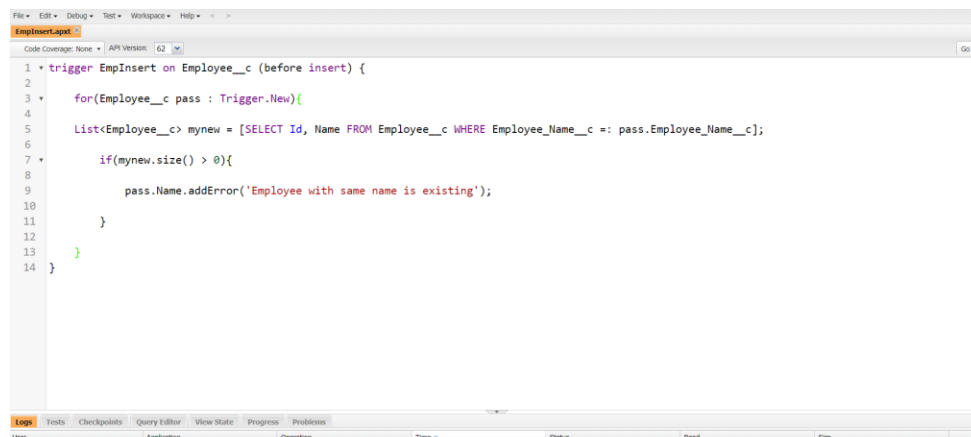

**Profiles:** Profiles are used to control user access to data and system features, ensuring that different users (e.g., HR, Managers, Employees) have the appropriate level of access to various objects and records.

**Permission Sets:** Permission sets extend user permissions beyond their profile, allowing for fine-grained control over who can view, create, or edit specific records.

### 4. Apex Triggers:

Apex Triggers are utilized for automation, allowing the system to automatically execute actions when certain conditions are met, such as updating records or sending notifications upon employee status changes, project updates, or new record creation.

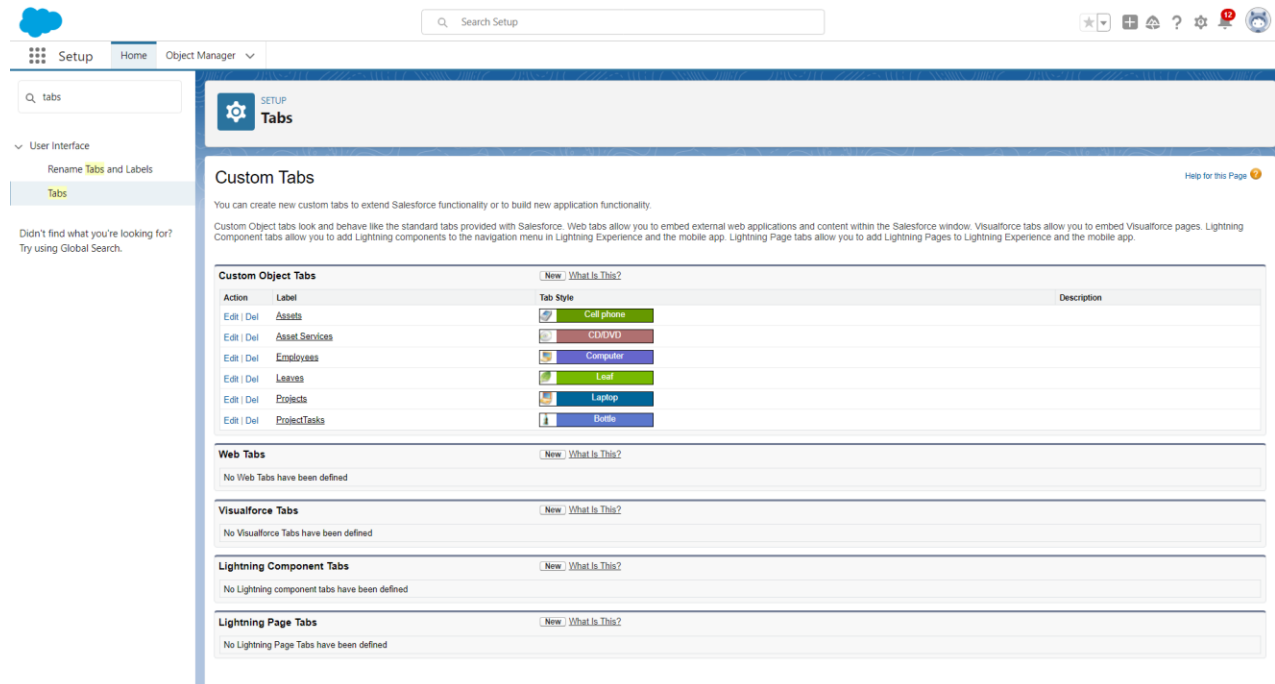

```

1 trigger EmpInsert on Employee__c (before insert) {
2
3     for(Employee__c pass : Trigger.New){
4
5         List<Employee__c> mynew = [SELECT Id, Name FROM Employee__c WHERE Employee_Name__c =: pass.Employee_Name__c];
6
7         if(mynew.size() > 0){
8
9             pass.Name.addError('Employee with same name is existing');
10
11         }
12     }
13 }
14

```

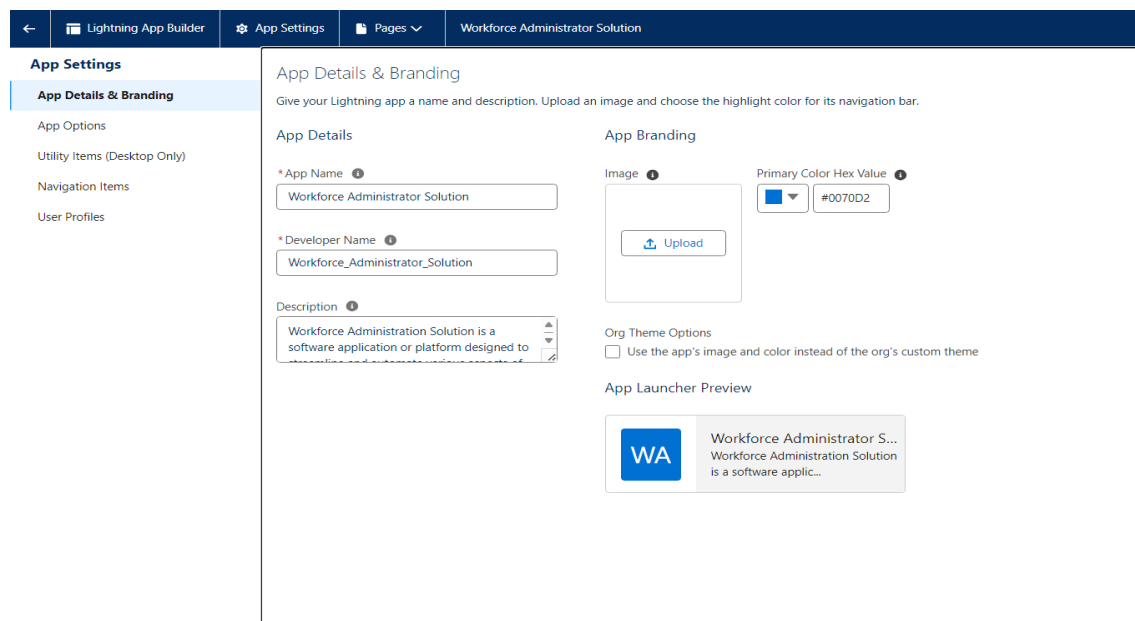

## 5. Custom Tabs :

Custom Tabs are created for easy navigation to key objects such as "Employee" and "Project." This improves the user experience by making it easy for users to access and manage these objects within the Salesforce interface.

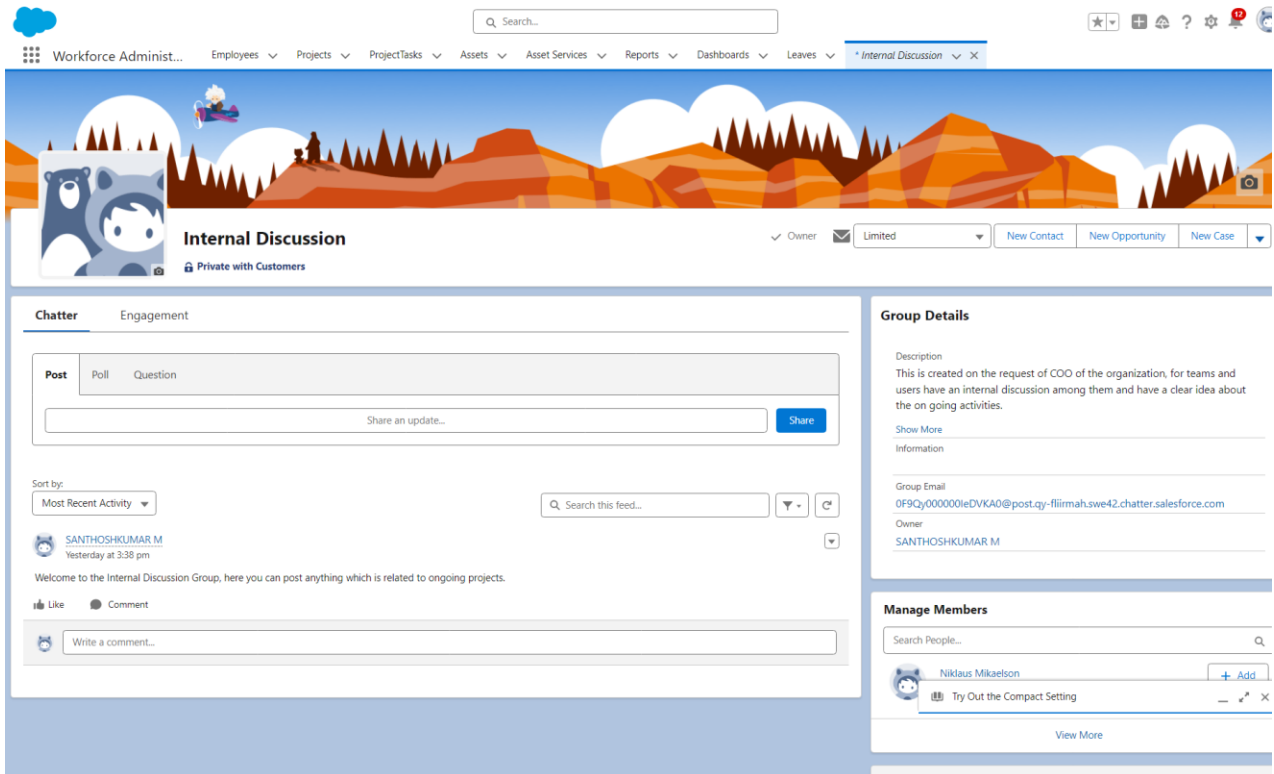

## 6. Lightning Components:

- The project leverages Lightning Experience to create a modern, responsive user interface. Lightning Components are used to build custom, reusable components that improve the usability of the system, especially for displaying complex data or workflows in a user-friendly way.

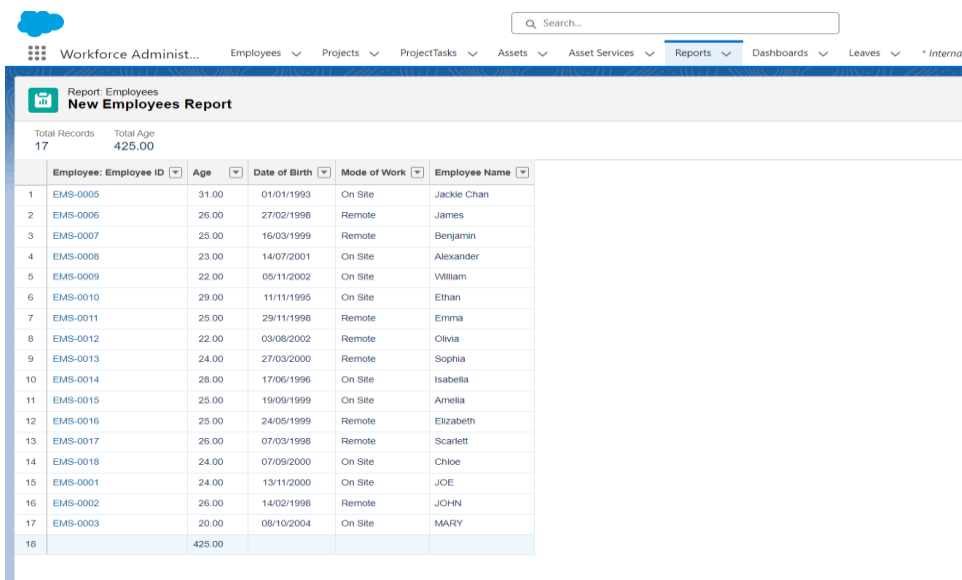

## 7. Chatter:

Chatter is utilized for collaboration, allowing users to communicate, share updates, and collaborate on projects or employee matters. Chatter groups can be created for teams, departments, or specific projects, enhancing internal communication.

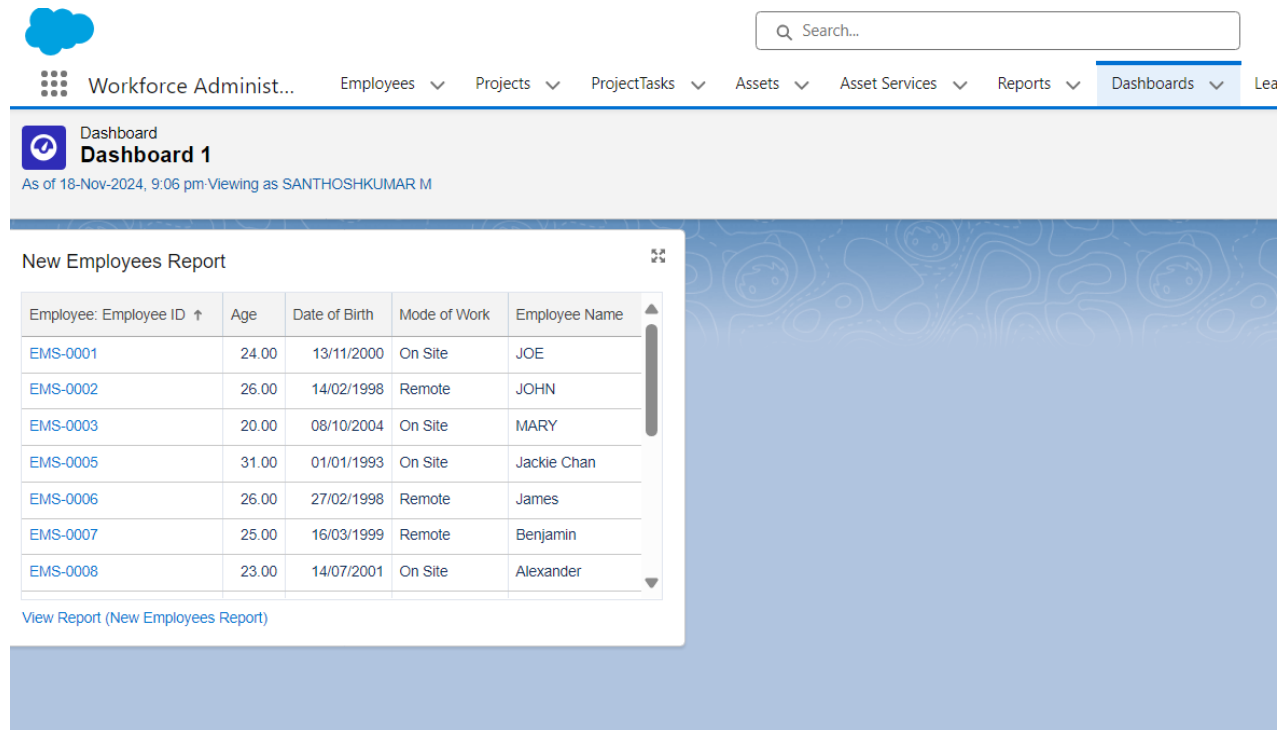

## 8. Reports and Dashboards:

**Reports:** Custom reports are created to track and analyze workforce and project data, such as employee performance, project status, and resource utilization. These reports help HR and management make data-driven decisions.

	Employee	Employee ID	Age	Date of Birth	Mode of Work	Employee Name
1	EMS-0005	31.00	01/01/1993	On Site	Jackie Chan	
2	EMS-0006	26.00	27/02/1996	Remote	James	
3	EMS-0007	25.00	16/03/1999	Remote	Benjamin	
4	EMS-0008	23.00	14/07/2001	On Site	Alexander	
5	EMS-0009	22.00	05/11/2002	On Site	William	
6	EMS-0010	29.00	11/11/1995	On Site	Ethan	
7	EMS-0011	25.00	29/11/1996	Remote	Emma	
8	EMS-0012	22.00	03/06/2002	Remote	Olivia	
9	EMS-0013	24.00	27/03/2000	Remote	Sophia	
10	EMS-0014	28.00	17/06/1996	On Site	Isabella	
11	EMS-0015	25.00	19/09/1999	On Site	Amelia	
12	EMS-0016	25.00	24/05/1999	Remote	Elizabeth	
13	EMS-0017	26.00	07/03/1996	Remote	Scarlett	
14	EMS-0018	24.00	07/09/2000	On Site	Chloe	
15	EMS-0001	24.00	13/11/2000	On Site	JOE	
16	EMS-0002	26.00	14/02/1996	Remote	JOHN	
17	EMS-0003	20.00	08/10/2004	On Site	MARY	
18		425.00				

**Dashboards:** Dashboards provide a visual summary of key metrics, offering real-time insights into employee and project performance through charts, graphs, and tables.

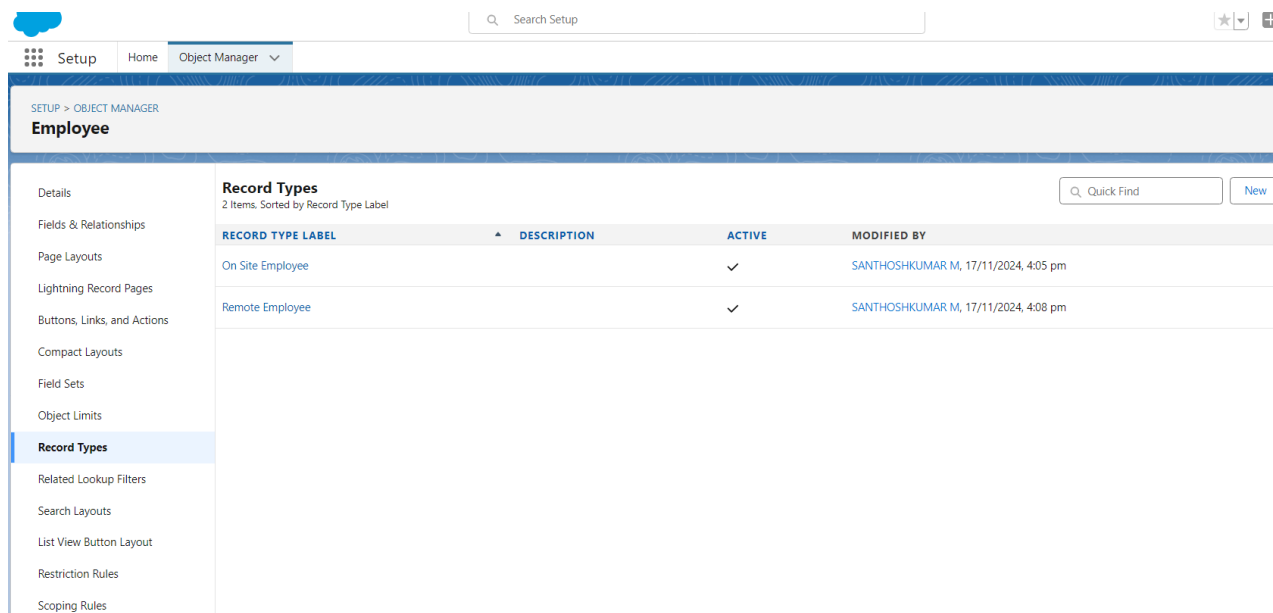

The screenshot shows the 'Dashboard 1' interface. At the top, there is a search bar and a navigation menu with options: Workforce Administ..., Employees, Projects, ProjectTasks, Assets, Asset Services, Reports, and Dashboards. The 'Dashboards' menu is selected. Below the navigation bar, the dashboard title 'Dashboard 1' is displayed, along with the date and time 'As of 18-Nov-2024, 9:06 pm' and the user 'Viewing as SANTHOSHKUMAR M'. The main content area features a 'New Employees Report' table with columns: Employee ID, Age, Date of Birth, Mode of Work, and Employee Name. The table lists eight employees with their respective details. A 'View Report (New Employees Report)' link is located below the table.

Employee ID	Age	Date of Birth	Mode of Work	Employee Name
EMS-0001	24.00	13/11/2000	On Site	JOE
EMS-0002	26.00	14/02/1998	Remote	JOHN
EMS-0003	20.00	08/10/2004	On Site	MARY
EMS-0005	31.00	01/01/1993	On Site	Jackie Chan
EMS-0006	26.00	27/02/1998	Remote	James
EMS-0007	25.00	16/03/1999	Remote	Benjamin
EMS-0008	23.00	14/07/2001	On Site	Alexander

## 9. Record Types and Page Layouts:

**Record Types:** Different record types are created for distinct categories of employees, such as "On-Site" and "Remote" employees. This allows for customized page layouts and field visibility tailored to different employee types.

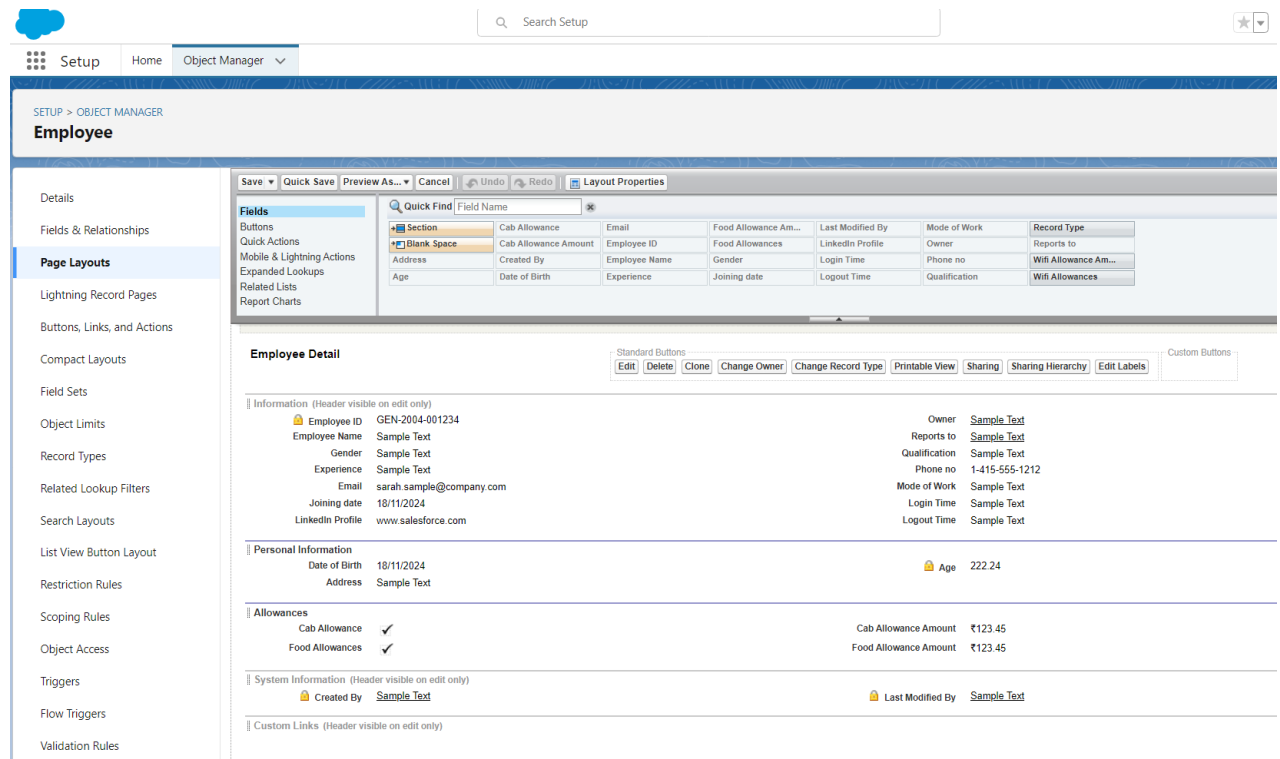

The screenshot shows the 'Setup - Object Manager - Employee' interface. The left sidebar contains a navigation menu with options: Details, Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Record Types, Related Lookup Filters, Search Layouts, List View Button Layout, Restriction Rules, and Scoping Rules. The 'Record Types' option is selected. The main content area displays the 'Record Types' for the 'Employee' object, sorted by 'Record Type Label'. It shows two record types: 'On Site Employee' and 'Remote Employee', both of which are active. The 'On Site Employee' record type was modified by SANTHOSHKUMAR M on 17/11/2024 at 4:05 pm. The 'Remote Employee' record type was modified by SANTHOSHKUMAR M on 17/11/2024 at 4:08 pm.

RECORD TYPE LABEL	DESCRIPTION	ACTIVE	MODIFIED BY
On Site Employee		✓	SANTHOSHKUMAR M, 17/11/2024, 4:05 pm
Remote Employee		✓	SANTHOSHKUMAR M, 17/11/2024, 4:08 pm

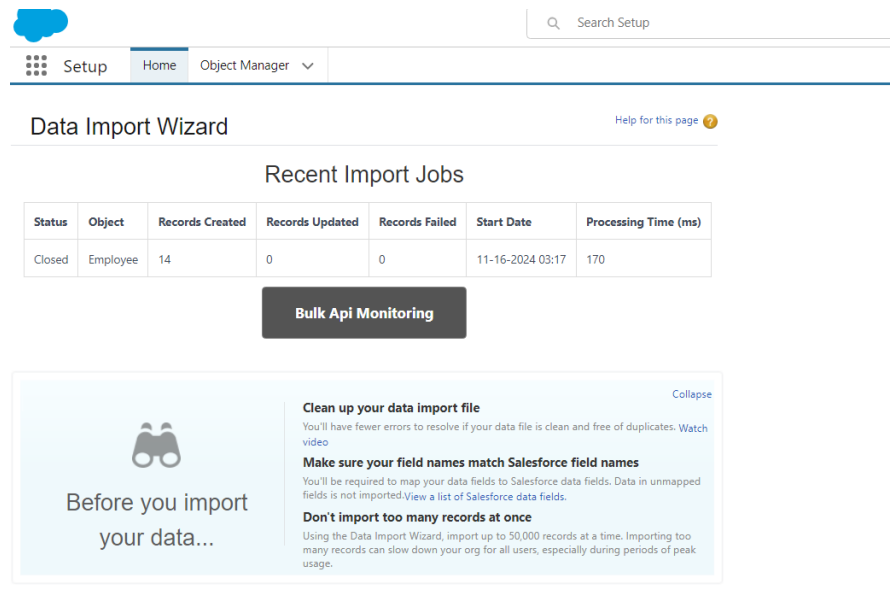

**Page Layouts:** Custom page layouts are defined for each record type, ensuring that the most relevant information is visible and accessible to users based on their role and the type of record they are working with.

The screenshot shows the Salesforce Setup interface for the 'Employee' object. The left sidebar lists various setup options, with 'Page Layouts' selected. The main area displays the 'Employee Detail' page layout, which includes sections for Information, Personal Information, Allowances, System Information, and Custom Links. The 'Information' section shows fields like Employee ID, Name, Gender, Experience, Email, and LinkedIn Profile. The 'Personal Information' section shows Date of Birth and Address. The 'Allowances' section shows Cab Allowance and Food Allowances. The 'System Information' section shows Created By and Last Modified By. The 'Custom Links' section is currently empty.

## 10. Data Import/Export Tools:

**Data Loader:** The Data Loader or Data Import Wizard is used to import bulk employee data, project details, or other records from external sources, ensuring seamless data migration into Salesforce.

The screenshot shows the Salesforce Data Import Wizard interface. At the top, there's a search bar and navigation tabs for Setup, Home, and Object Manager. Below the navigation, the 'Data Import Wizard' title is displayed. A 'Recent Import Jobs' table shows a single job for 'Employee' with 14 records created and 0 records updated. Below the table, there's a 'Bulk Api Monitoring' button. At the bottom, there's a section titled 'Before you import your data...' with a binoculars icon. This section contains three key points: 'Clean up your data import file', 'Make sure your field names match Salesforce field names', and 'Don't import too many records at once'. Each point includes a brief explanation and a link to a video or list of Salesforce data fields.

Status	Object	Records Created	Records Updated	Records Failed	Start Date	Processing Time (ms)
Closed	Employee	14	0	0	11-16-2024 03:17	170

**Before you import your data...**

- Clean up your data import file**  
You'll have fewer errors to resolve if your data file is clean and free of duplicates. [Watch video](#)
- Make sure your field names match Salesforce field names**  
You'll be required to map your data fields to Salesforce data fields. Data in unmapped fields is not imported. [View a list of Salesforce data fields.](#)
- Don't import too many records at once**  
Using the Data Import Wizard, import up to 50,000 records at a time. Importing too many records can slow down your org for all users, especially during periods of peak usage.

## **4. Detailed Steps to Solution Design**

- **Account Activation**
  - Create Employee and Project objects.
  - Add Project Asset and other related objects.
- **Asset Service**
  - Create custom tabs for Employee, Project, and other objects.
- **Lightning Pages**
  - Build Lightning Record Pages for objects like Employee and Project.
- **Relationships**
  - Add fields (e.g., Text, Date, Picklist, Formula) to Employee.
  - Establish master-detail relationships (e.g., Employee and Asset).
- **Data Management**
  - Implement DML operations (Insert, Update, Delete).
  - Create flows or workflows for user adaptation.
- **Profiles**
  - Define profiles for HR, Manager, and Employee.
  - Set object and field-level permissions.
- **Roles**
  - Create a role hierarchy (e.g., CEO > Manager > Employee).
- **Collaboration**
  - Set up Chatter Groups for internal team discussions.
- **Record Types and Permissions**
  - Create record types (e.g., On-Site and Remote Employees).
  - Use permission sets to manage user access.
- **Reporting and Dashboards**
  - Create reports for tracking metrics (e.g., department performance).
  - Build dashboards with charts and summaries.
- **Approval Process**
  - Implement an approval process for tasks like Leave Requests.
- **Apex Triggers**
  - Automate processes (e.g., assign assets to employees).
  - Write test classes to validate trigger functionality.

## **5. Testing and Validation**

### **1. Unit Testing**

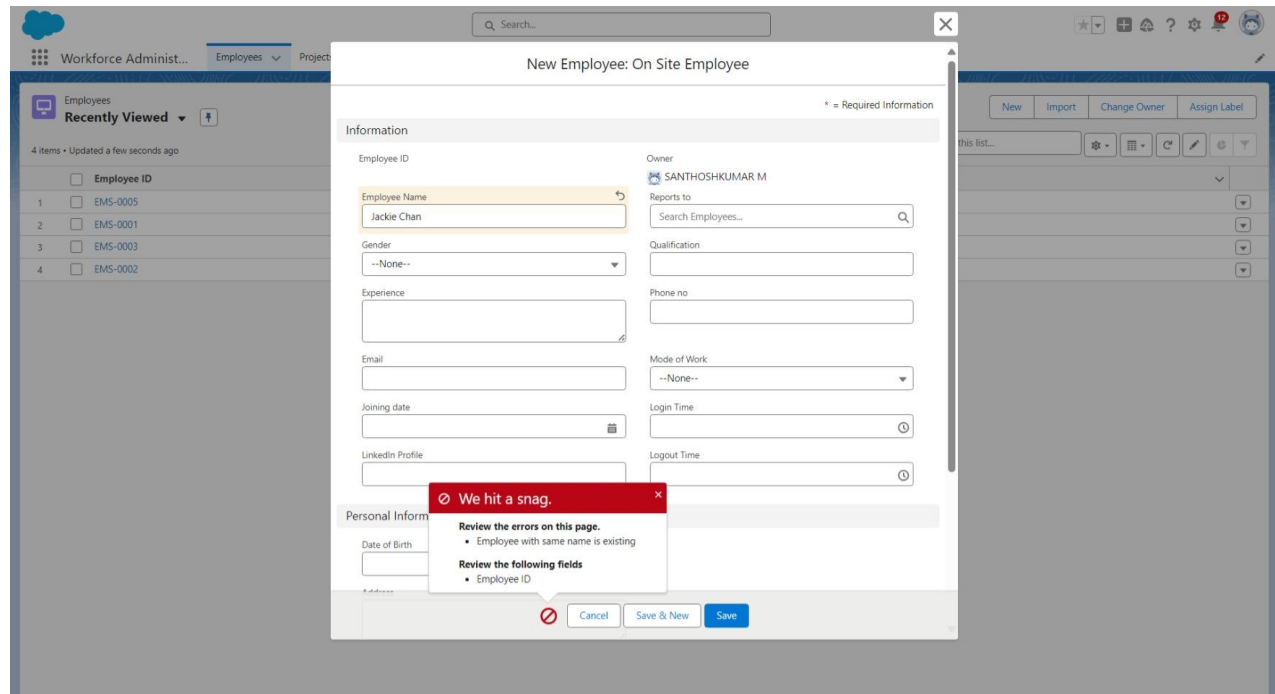

**Objective:** Validate backend logic such as Apex classes, triggers, and automation to ensure they work as intended.

- **Apex Classes:**
  - Write test classes to validate core logic for creating and managing Employee, Project, Project Asset, and other objects.
  - Include tests for:
    - Object creation (e.g., Employee records).
    - Automation workflows (e.g., assigning assets to employees).
    - Edge cases like invalid or missing data inputs.
- **Triggers:**
  - Test triggers for critical operations:
    - Automatically populating dependent fields (e.g., Years of Service).
    - Maintaining relationships (e.g., Master-Detail between Employee and Project Assets).
    - Bulk operations to ensure the solution handles large datasets effectively.
  - Test governor limits by simulating high-volume DML operations.

### **2. User Interface Testing**

**Objective:** Verify the functionality, usability, and access permissions for all UI components and workflows.

- **Testing Scope:**
  - **Custom Tabs:**
    - Validate navigation and data display for Employee, Project, and Project Asset objects.
  - **Lightning Pages:**
    - Confirm fields, buttons, and related lists function correctly on Employee and Project record pages.
  - **Dynamic UI Features:**
    - Test Record Types (e.g., On-Site Employee, Remote Employee) for appropriate layouts and field visibility.
    - Validate Lightning components like dashboards and reports for proper data rendering.
  - **Data Management UI:**
    - Test record creation, viewing, updating, and deletion workflows for accuracy.
  - **Permission Testing:**
    - Test different user roles and profiles (HR, Manager, Employee) to confirm appropriate field-level security, tab visibility, and access restrictions.

## 6. Key Scenarios Addressed by Salesforce in the Implementation Project

### Account Activation and Object Management

- **Scenario:** Creation of foundational objects such as Employee, Project, and Project Asset.
- **Solution:** Salesforce custom objects with defined relationships and custom fields address the need to structure employee and project data effectively.

### User Interface Customization

- **Scenario:** Displaying relevant data and workflows through user-friendly tabs and Lightning pages.
- **Solution:** Custom tabs and Lightning Record Pages offer intuitive navigation and access to key records.

### Field and Relationship Management

- **Scenario:** Establishing relationships between Employee and other objects (e.g., Project Asset) with relevant fields.
- **Solution:** Use of master-detail and lookup relationships to link data, along with custom fields (e.g., text, picklist, formula) to enhance data structure.

### Data Operations and Automation

- **Scenario:** Managing records with CRUD operations and automating repetitive tasks.
- **Solution:** Salesforce Flows, workflows, and triggers automate processes like assigning assets to employees and calculating service durations.

### Profiles and Permissions

- **Scenario:** Securing data access for different roles such as HR, Manager, and Employee.
- **Solution:** Profiles, roles, and permission sets ensure appropriate access to fields, tabs, and records.

### Collaboration and Communication

- **Scenario:** Enabling team discussions and cross-functional collaboration.
- **Solution:** Chatter groups facilitate communication and information sharing within the organization.

### Dynamic Record Types

- **Scenario:** Differentiating between On-Site and Remote Employee workflows.
- **Solution:** Record types and tailored page layouts customize workflows for different employee categories.

### Reporting and Dashboards

- **Scenario:** Monitoring performance metrics and analyzing trends.
- **Solution:** Custom reports and dashboards display data insights like employee performance, project progress, and asset utilization.

### Approval Processes

- **Scenario:** Standardizing the approval of leave requests or budget allocations.
- **Solution:** Salesforce Approval Processes streamline multistep approvals with notifications and record locking.

### Data Import and Management

- **Scenario:** Migrating data into Salesforce during implementation.
- **Solution:** Data Loader and Data Import Wizard ensure accurate and seamless data integration.

### User Adaptation and Training

- **Scenario:** Supporting new users to adopt Salesforce effectively.
- **Solution:** Guided flows and user-friendly interfaces facilitate learning and ease of use.

### Apex Triggers for Custom Automation

- **Scenario:** Automating specific business logic such as assigning default assets upon employee creation.
- **Solution:** Apex Triggers implement advanced automation beyond declarative capabilities.

## **7. Conclusion**

In conclusion, the Workforce Administration Solution (Dev) project successfully implemented a comprehensive Salesforce solution to streamline and automate key HR and workforce management processes. Key achievements include the creation of custom objects for employee and project management, the automation of onboarding, performance tracking, and role-based access control, as well as the integration of self-service portals and mobile accessibility for employees. The solution enhanced data integrity, reporting capabilities, and collaboration across teams, while ensuring compliance with security and audit requirements. Overall, Salesforce has transformed the organization's workforce management, improving efficiency, transparency, and employee engagement.
